

You know where, we know how

Concrete breakwater pontoons from Finland to the USA

A cooperation between Conceptum Logistics Finland, USA and Germany shipped 2,528.82 cbm of Concrete Breakwater Pontoons from Helsinki to New York City.

As the pontoons are very sensitive items it required precise loading and stacking arrangements. After arrival in New York City, the single pieces were discharged directly into water and towed with tugs to the final destination for installation.

Due to the heavy traffic around Brooklyn Bridge and the expensive tug-manoeuving, coordination and information flow needed to be utmost accurate and quick.
