

You know where, we know how

### Too large and heavy for Alabama roads - a 36 m long Absorber and Main Reactor to Eastaboga, AL

In cooperation between Conceptum Logistics Germany, USA and China, we moved an absorber and main reactor with a total of 1,000 cbm from Shanghai via Houston to the final site in Eastaboga, AL - USA.

Due to the weight and dimensional limitations in Alabama the cargo had to be shipped by barge to an inland terminal closest to the final destination from where we performed a barge roll-off operation to proceed the last 100 miles by road in two night moves.
